Flutter Application Name - Spatial Keeps

GitHub Repository - (https://github.com/Lizzim24/CASA0015-Spatial_Keeps.git)

Introduction to Application

Spatial Keeps is a cross-platform Flutter application designed to help users capture, organise, and reflect on meaningful objects and spaces through contextual photography. The application allows users to create personal collections of images while attaching spatial and environmental metadata such as GPS location, timestamp, device orientation, and descriptive tags. Rather than functioning as a traditional photo gallery, the project explores how digital systems can support spatial memory and emotional connection to environments through contextual information.

The application uses Flutter for the front-end interface and Firebase services including Authentication, Cloud Firestore, and Storage for backend functionality and cloud-based data management. Users can upload, edit, categorise, and optionally share collections publicly with other users. The interface focuses on simplicity, visual clarity, and accessibility while supporting both Android and iOS platforms.

This project investigates how mobile sensing technologies and connected environment concepts can enhance personal documentation and interaction with everyday spaces. By combining photography, contextual metadata, and lightweight social sharing, the application demonstrates how mobile systems can create richer digital representations of personal experiences and environments.
